Introduction

The Minnesota Comprehensive Health Association (MCHA) retained Wakely Consulting Group, LLC (Wakely) to collect data related to the Minnesota state-based reinsurance program referred to as the Minnesota Premium Security Plan (MPSP), review the data for reasonability, calculate the reinsurance payments to the issuers participating in the program, and provide summary reports for MCHA to distribute, as appropriate, to stakeholders.

This document has been prepared for the use of MCHA and its Board of Directors. Wakely understands that this report will be made public and distributed to stakeholders beyond MCHA and its Board of Directors due to Minnesota Statute §62E.24. Wakely does not intend to benefit third parties and assumes no duty or liability to other parties who receive this work. This report should be reviewed in its entirety. This document contains the data, assumptions, and methods used in these analyses and satisfies the Actuarial Standard of Practice (ASOP) 41 reporting requirements.

This is the final 2020 benefit year report for MPSP. Figures and tables in this report supersede figures and values previously communicated in 2020 MPSP quarterly reporting.

Executive Summary

The 2020 benefit year reinsurance amount for MPSP is \$160,210,351. The data that was used to calculate reinsurance is based on enrollment and claim data Minnesota issuers submitted to the CMS External Data Gathering Environment (EDGE) Server through April 30th, 2021 and processed by CMS with an outbound date of May 3rd, 2021. To calculate reinsurance, Wakely used the High-Cost Risk Pool Detail Extract (HCRPDE) files generated by CMS to identify claims and enrollees eligible for reinsurance.

For each quarter of the 2020 benefit year, Minnesota issuers submitted data to Wakely that allowed MCHA to report on the MPSP program throughout the year. The figure to the right shows the reinsurance amount reported in each report for 2018, 2019, and 2020. Note that each quarter within a year is cumulative. That is, the \$14.7 million in the 2020Q1 report is included in the \$144.3 million in the 2020Q4 report. The increases between fourth quarter and the final reinsurance amounts are primarily the result of claim runout and claim systems (e.g. EDGE server vs internal claim system).

In February 2021, Wakely estimated 2020 benefit year reinsurance. The \$165.8 million estimate was approximately 3.5% ($\approx \frac{\$165.8M}{\$160.2M} - 1$) higher than the actual reinsurance amount. The difference was caused by both the number of reinsurance eligible enrollees (3,375 estimated vs 3,279 actual) and the average reinsurance cost per eligible enrollee (\$49,124 estimated vs \$48,860 actual). The combined

impact led to an approximate \$5.6 million dollar difference between the final 2020 reinsurance amount and Wakely's estimate (= \$165.8M - \$160.2M).

Table 1 displays final enrollment and reinsurance under MPSP 2018, 2019, and 2020.

Table 1: Reinsurance and Enrollee Count

	Distinct Enrollees	Reinsurance Amount
2018 Statewide	2,925	\$136,124,512
2019 Statewide	3,183	\$149,660,234
2020 Statewide	3,279	\$160,210,351

The remainder of this report provides a description of the data used, methodology, additional breakout of reinsurance for reporting, associated caveats, and disclosures.

EDGE Data Description

This section describes the data that Wakely used to calculate 2020 benefit year reinsurance. From a high-level, the EDGE server is a data warehouse that processes data for CMS to administer the risk adjustment program in the individual and small group markets. Files that issuers submit to the EDGE server are referred to as *inbound* files. The EDGE server processes inbound files and returns another set of data files back to the issuers. These files are referred to as *outbound* files. Additional descriptions of each type of file is provided later in this section.

Minnesota issuers provided both the 2020 inbound and the 2020 outbound files for Wakely to use to calculate final 2020 reinsurance. Wakely used the outbound file referred to as the *High Cost Risk Pool Detail Extract* (HCRPDE) to identify claims and enrollees eligible for reinsurance. This table is limited to the claims and enrollment spans eligible for payments in the 2020 benefit year federal high-cost risk pool program. The Data Review section of this memorandum outlines Wakely's review of the issuers' EDGE data.

EDGE Server Inbound Files

All Minnesota issuers participating in the individual market are required to submit claim and enrollment data to the EDGE server. CMS uses this data to administer the permanent risk adjustment program, which includes the high-cost risk pool program. Historically, CMS used EDGE data to calculate reinsurance under the Federal Transitional Reinsurance Program that ended in benefit year 2016. CMS has extensive business rules that determine if a claim or enrollment span is eligible under the risk adjustment or high-cost risk pool programs. For example, if an issuer submits an inpatient claim for an enrollee that overlaps with an existing inpatient claim for that enrollee, then the EDGE server will reject the new claim. Issuers are permitted to fix issues with ineligible claims and then resubmit them to the EDGE server until the final submission date of the benefit year. For benefit year 2020, the final submission date was April 30th, 2021.

EDGE Server Outbound Files

After the submission deadline, the EDGE Server processes the submitted inbound files to generate the outbound files. Issuers then receive the processed and summarized versions of the outbound files. There is an attestation and discrepancy-reporting period where an issuer may report to CMS any

calculation issues identified by the issuer. For benefit year 2021, the discrepancy reporting period for CMS ended on May 19th, 2021.

In addition, the issuers must respond to any final items flagged by CMS in the quantity and quality data evaluation process. The quantity assessment aims to ensure completeness of submitted data. The quality assessment measures the integrity and accuracy of the data. Both of these assessments are repeated throughout the submission process. CMS identified multiple issuers during benefit year 2020 as being an outlier in one or more metrics. These issuers were required to submit a justification or correct the data quality issues. In all instances, the issuers reported that their justification sent to CMS was accepted or the data issue was resolved prior to the submission deadline.

CMS Attestation

CMS requires that an employee with the authority to both legally and financially bind the issuer attest to the accuracy of the issuer's EDGE data submission. CMS has the authority to impose default risk adjustment transfers for issuers that fail to submit sufficient EDGE data. CMS can also impose civil monetary penalties if issuers violate other federal requirements. This includes falsifying or misrepresenting data either intentionally or recklessly.

MPSP Attestation

Officers at each organization signed an attestation regarding the accuracy, truthfulness, and completeness of the EDGE data that they submitted to Wakely. Issuers attested that if there is an error found in the EDGE server data that impacts reinsurance payments, then the issuer will promptly notify and work with MCHA and Wakely to resolve any discrepancies in reinsurance calculations.

Methodology

2020 Reinsurance Timeline

Table 2 on the next page provides the timeline and key dates for calculating 2020 benefit year reinsurance. In January 2021, Wakely hosted a call with the eligible issuers to outline the spring timeline and the structure of the data request. Issuers provided EDGE server data to Wakely twice during the spring of 2021. The first data request, labeled *preliminary*, was used to work through data transfer issues and to develop the model that was used to calculate final reinsurance. The final benefit year reinsurance calculation used the final EDGE server data request.

After Wakely's calculations and data review process, each issuer received a file that contained the claims for each reinsurance eligible enrollee for both the preliminary and final data requests. The file permitted issuers to review Wakely's calculation and report any discrepancies before the deadline of June 4th, 2021.

Table 2: 2020 Benefit Year Calculation Timeline

Description	Date
All Issuer Data Call	1/21/2021
Preliminary Data Requested by Wakely	2/19/2021
Preliminary Data Due to Wakely	3/5/2021
Preliminary Results Sent to Issuers	4/2/2021
Final Data Requested by Wakely	4/23/2021
Final Data Due to Wakely	5/7/2021
Final Results Sent to Issuers	5/21/2021
End of MPSP Discrepancy Reporting	6/4/2021

Methodology Description

Wakely used 2020 EDGE Server data with an inbound date of April 30th, 2021 and outbound date of May 3rd, 2021 to calculate final 2020 benefit year reinsurance. The data included both enrollment and claim-level detail that issuers submitted to the EDGE server and the data returned by the EDGE server to the issuers. Wakely used the HCRPDE outbound file to identify eligible enrollees and claims. For each issuer, Wakely aggregated claims to the enrollee-level and applied the 2020 MPSP reinsurance parameters to calculate reinsurance for each enrollee. The figure below illustrates the 2020 reinsurance parameters.

Reinsurance Parameters		
Claim Range ^[1]	Liability	
<div> <div></div> <div>\$0</div> <div>\$50,000</div> </div>	Plan Pays: 100%	
<div> <div></div> <div>\$50,001</div> <div>\$250,000</div> </div>	Plan Pays: 20% MPSP Pays: 80%	
<div> <div></div> <div>\$250,001</div> </div>	Plan Pays ^[2] : 100%	

[1] - Claim Range Excludes Member Cost Sharing
[2] - Excludes Impact of High-Cost Risk Pool

Wakely aggregated the calculated reinsurance for each issuer to report at the statewide level. For this report, Wakely allocated reinsurance amounts for enrollees transferring between health plan identifiers based on incurred claims. For example, under certain circumstances, an enrollee might have been enrolled in both a silver and a gold plan for a portion of 2020. If 75% of an enrollee's claims occurred in the silver plan and 25% occurred in the gold plan, then Wakely allocated 75% of the reinsurance to the silver plan and 25% to the gold plan. Transferring health plan identifiers does not impact results when reporting at an issuer level; however,

when reporting at a more granular level (e.g. metal), reported results may change if another allocation method is used.

Analysis

In compliance with Minnesota Statutes 62E.24 subdivision 2, this section provides additional detail for the reinsurance amount shown in Table 1. The distribution total in the following tables may not add to 100% due to rounding.

Reinsurance by Eligible Health Carrier

Table 3 provides the total reinsurance payments to each eligible health carrier along with the associated carrier's HIOS identifier.

Table 3: Reinsurance Amount by Carrier

Health Carrier	HIOS ID	2020 Reinsurance
HMO Minnesota (Blue Plus)	57129	\$36,630,613
Group Health Plan, Inc (HealthPartners)	34102	\$35,315,814
Medica Insurance Company	31616	\$50,918,841
Preferred One Insurance Company	88102	\$1,382,343
UCare Minnesota	85736	\$35,962,740
Total Statewide	-	\$160,210,351

Reinsurance by Area

Table 4 shows the amount of reinsurance for each of Minnesota's rating regions. A list of counties in each rating area can be found in [Appendix D](#), the [Minnesota Department of Commerce](#) website, or the [CMS](#) website.

Table 4: Reinsurance Amount by Area

Rate Region	2020 Reinsurance	2020 Dist'n	2019 Dist'n	2018 Dist'n
Rating Area 1	\$17,852,313	11%	12%	10%
Rating Area 2	\$9,286,737	6%	6%	6%
Rating Area 3	\$10,999,398	7%	7%	6%
Rating Area 4	\$3,551,719	2%	3%	3%
Rating Area 5	\$5,868,059	4%	4%	5%
Rating Area 6	\$7,702,045	5%	4%	4%
Rating Area 7	\$11,938,767	7%	9%	7%
Rating Area 8	\$91,198,691	57%	54%	55%
Rating Area 9	\$1,812,622	1%	1%	2%
Statewide	\$160,210,351	100%	100%	100%

Reinsurance by Metal Level

Table 5 provides the reinsurance amount and distribution by metal tier. Four different metal tiers in the individual market reflect different expected cost sharing levels. The leanest is the bronze plan where an enrollee can expect to pay for about 40% of his or her total medical costs out of pocket in the form of cost sharing such as deductibles, coinsurance, and copays. The richest plan type is the platinum tier where an enrollee can expect to pay approximately 10% of total costs out of pocket. There is a fifth tier called catastrophic. Enrollment in catastrophic plans is limited to individuals who are eligible for hardship exemption or are under the age of 30.

Table 5: Reinsurance Amount by Metal Tier

Metal Tier	2020 Reinsurance	2020 Dist'n	2019 Dist'n	2018 Dist'n
Catastrophic	\$828,637	1%	0%	0%
Bronze	\$72,180,949	45%	44%	48%
Silver	\$45,920,423	29%	29%	29%
Gold	\$40,207,071	25%	26%	22%
Platinum	\$1,073,271	1%	1%	1%
Total	\$160,210,351	100%	100%	100%

Reinsurance by Exchange Status

This section provides the reinsurance based on whether the enrollee purchased coverage through Minnesota's exchange, MNSure, or directly through the issuer.¹

Table 6: Reinsurance Amount by Exchange Status

Exchange Status	2020 Reinsurance	2020 Dist'n	2019 Dist'n	2018 Dist'n
On-Exchange	\$109,826,779	69%	69%	68%
Off-Exchange	\$50,383,572	31%	31%	32%
Total	\$160,210,351	100%	100%	100%

Reinsurance by Plan Type

This section provides reinsurance amounts by plan type. In the Affordable Care Act, some individuals and families qualify for cost-sharing reduction subsidies (CSR) which lower out-of-pocket costs. There are several different levels of CSRs. The first is 73% which reduces the individual's out-of-pocket cost to approximately 27% (= 1 - 73%) of total medical costs. CSR plans are only available on the exchange. The 87% and 94% CSR plan types are not included in Table 7 because Minnesotans eligible for these plan types are enrolled in MNCare, Minnesota's Basic Health Plan. Finally, there are limited cost-sharing and zero cost-sharing plans for American Indians and Alaska Natives.

Table 7: Reinsurance Amount by Plan Type

Plan Type	2020 Reinsurance	2020 Dist'n	2019 Dist'n	2018 Dist'n
Standard	\$144,240,449	90%	90%	91%
Zero Cost Sharing	\$615,120	0%	0%	0%
Limited Cost Sharing	\$472,714	0%	0%	0%
73% CSR	\$14,882,068	9%	9%	9%
Total	\$160,210,351	100%	100%	100%

Reinsurance by Claim Spend

Please see [Appendix A](#) for reinsurance by claim spend level.

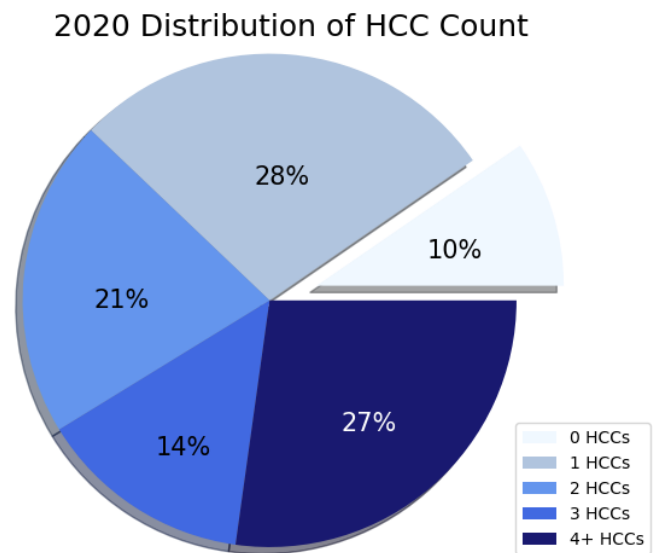

Distribution of HCC Count

The chart below provides the hierarchical condition category (HCC) distribution for the reinsurance eligible population. HCCs are used by CMS as part of the risk adjustment process that transfers money in the individual market from issuers that enrolled a healthier population to issuers that enrolled a

¹Multiple issuers updated the on- and off-exchange mapping in the data they provided to Wakely between the 2019Q2 and 2019Q3 reports. As a result, the 2019 and 2020 distributions are not directly comparable to the 2019Q1 and 2019Q2 quarterly reports.

sicker population. An enrollee is assigned to an HCC based on his or her medical diagnostic history. For example, if an enrollee fractures his or her hip in an accident, the doctor may code the medical claim with a hip fracture diagnosis code.

That diagnosis code then identifies that enrollee in the *Hip Fractures and Pathological Vertebral or Humerus Fractures* condition category (HCC226). On the other hand, there are diagnosis codes that do not map to a payment HCC. As a result, an enrollee may not be assigned to an HCC even though he or she may have a claim. Enrollees can have more than one HCC in a year. Typically, the more HCCs an enrollee has, the sicker and more costly he or she is. As a general rule of thumb, approximately 20% of the individual commercial population are assigned to at least one HCC in any given year. In other words, 80% of the general individual commercial population is not assigned to an HCC. In comparison, only 10% of enrollees eligible for reinsurance payments do not have an HCC. These enrollees may have experienced a traumatic accident with a diagnosis code not included in the HCC model, may have a rare condition that is not represented in the HCC model, or may have diagnosis codes that were not coded correctly.

The HCC model is hierarchical and groups together similar conditions. For example, diabetes has three HCCs: Diabetes with Acute Complications (HCC019), Diabetes with Chronic Complications (HCC020), and Diabetes without Complication (HCC021). An enrollee with a diagnosis code in both HCC019 and HCC021 would only be classified as HCC019 to avoid double counting. Finally, the HCC model groups the diabetic HCCs into one Diabetic Group (G01). Similar hierarchies and groupings exist for other conditions. [Appendix B](#) gives the list of the most prevalent HCCs and groupings during benefit year 2020 for enrollees eligible for reinsurance.

This analysis excludes Prescription Drug Categories (RXC). RXCs are similar to HCCs except RXCs are identified using National Drug Codes (NDCs) or service codes that indicate the enrollee's prescription drug utilization.

Reinsurance by Product

[Appendix C](#) gives the amount of reinsurance and number of claimants that exceeded \$50,000 in claims by product and exchange status. To define product, Wakely used the first ten digits of the HIOS plan identifier and requested that issuers provide a product name associated with the product identifier. For the column labeled *Claimants*, an enrollee is double counted if he or she transferred between products during the experience period. As a result, the claimant count in Appendix C does not match the enrollee count in Table 1. The column labeled *Claimants* shows "<100" for product and exchange-status combinations with less than 100 claimants for protected health information (PHI)

reasons.²

Data Review

This section describes the data checks performed by Wakely during the reinsurance calculation process.

Inbound Files versus High Cost Risk Pool Comparison

Wakely compared the claims in the inbound EDGE server files with an accepted flag against the list of claims underlying the HCRPDE table.³ This analysis included a check to ensure that the plan paid amount on both the HCRPDE and the inbound EDGE server files were consistent.

1332 Waiver Application Comparison

Wakely compared the portion of enrollees with claims above the attachment point against the claim continuance table located in the actuarial report in Minnesota's 1332 Waiver. The table is based on the 2015 individual market that is significantly different from the 2020 individual market. In total, approximately 2% of the population was expected to exceed the \$50,000 attachment point based on the 1332 Waiver Application, which was close to the proportion of enrollees exceeding the attachment point in this report.

2020Q4 MPSP Report Comparison

Wakely compared the list of enrollees contained in the 2020Q4 quarterly report against the list of enrollees in the final EDGE server data. Issuers provided the data used for the quarterly reports that included only enrollees with claims that exceeded the reinsurance attachment point. In general, if an enrollee was in the 2020Q4 report, then he or she should also be eligible for reinsurance in the final calculation. A small number of enrollees in the 2020Q4 data request were not eligible for reinsurance in the final 2020 calculation. This occurs when an enrollee has claims retroactively adjusted which causes him or her to drop below the reinsurance attachment point or having claims fail to be accepted to the EDGE server due to business rules.

Risk Score Comparison

Wakely used the issuers' inbound claim files to independently calculate risk scores and compared the results against risk scores that CMS calculated for the federal risk transfer payment program. As described above, risk scores are calculated using diagnosis codes, pharmacy codes, demographic, and enrollment information submitted to the EDGE server. Significant differences between Wakely's calculated risk score and the CMS calculated risk score could imply that Wakely was missing diagnosis or pharmacy codes, and as a result, the claims associated with the missing codes. There were no differences between CMS and Wakely's risk score assignments.

²Multiple issuers updated the on- and off-exchange mapping in the data they provided to Wakely between the 2019Q2 and 2019Q3 reports. As a result, the results shown in Appendix C for the final 2019 and 2020 reports are not directly comparable to the table shown in the 2019Q2 quarterly report.

³Besides being accepted by the EDGE server, a claim must also meet other requirements to be included in the HCRPDE. For example, a claim must occur during a valid enrollment span. Wakely used the EDGE Server Business Rules 18.0 as a reference for reviewing the submitted EDGE encounter data. For additional information, please see <https://www.regtap.info/>

Cost Sharing Reductions

Between 2014 and 2017, CMS reduced a carrier's reinsurance in the Federal Transitional Reinsurance Program to account for cost-sharing reduction subsidies included in plan paid amounts. The federal government reimbursed these costs under a separate program. Issuers received advanced payment under this program until October 2017 when payments ended. There is ongoing litigation around amount of CSRs owed for the 2020 benefit year. Since the federal government is not currently paying these subsidies, Wakely did not adjust 2020 benefit year reinsurance for CSR subsidies.

State Mandated Benefits

Wakely did not adjust the reinsurance calculation methodology for Pediatric Acute-Onset Neuropsychiatric Syndrome (PANS) or Pediatric Autoimmune Neuropsychiatric Disorder Associated with Streptococcal Infection (PANDAS) claims at the direction of MCHA. Wakely's understanding is that issuers and Minnesota Department of Commerce (DoC) will make the appropriate adjustments when issuers submit PAN/PANDAS data to DoC for reimbursement.

Disclosures and Limitations

Responsible Actuary. I, Tyson Reed, am responsible for this communication. I am a member of the American Academy of Actuaries and a Fellow of the Society of Actuaries. I meet the Qualification Standards of the American Academy of Actuaries to issue this report.

Intended Users. This information has been prepared for the sole use of the management of MCHA. Wakely understands that this report will be made public. Distribution should be made in its entirety and should be evaluated only by qualified users. The parties receiving and reading this report should retain their own actuarial experts when interpreting results.

Risks and Uncertainties. The assumptions and resulting calculated reinsurance included in this report are inherently uncertain and could change depending on pending court cases and EDGE server review. Users of the results should be qualified to use it and understand the results and the inherent uncertainty. Actual results may vary, potentially materially, from Wakely's calculation. Wakely does not warrant or guarantee that Minnesota issuers will attain the calculated values included in the report. It is the responsibility of those receiving this report to review the assumptions carefully and notify Wakely of any potential concerns.

Conflict of Interest. I am financially independent and free from conflict concerning all matters related to performing the actuarial services underlying these analyses. In addition, Wakely is organizationally and financially independent of MCHA.

Data and Reliance. I have relied on others for data and assumptions used in the assignment. I have reviewed the data for reasonableness, but I have not performed an independent audit or otherwise verified the accuracy of the data / information. If the underlying information is incomplete or inaccurate, my estimates and calculations may be impacted, potentially significantly. The information included in the other sections identifies the key data and assumptions.

Subsequent Events. Material changes in state or federal laws regarding health benefit plans may have a material impact on the results included in this report. I am not aware of any events that would

affect the results of this analysis not already discussed above.

Contents of Actuarial Report. This document constitutes the entirety of the actuarial report and supersedes any previous communications provided to MCHA for Benefit Year 2020.

Deviations from Actuarial Standards of Practice (ASOPs). Wakely completed the analyses using sound actuarial practice. To the best of my knowledge, the report and methods used in the analyses comply with the appropriate ASOPs with no known deviations. A summary of ASOP compliance is listed below:

- ASOP No. 1, Introductory Actuarial Standard of Practice
- ASOP No. 23, Data Quality
- ASOP No. 41, Actuarial Communication
- ASOP No. 56, Modeling

Sincerely,

A handwritten signature in black ink that reads 'Tyson Reed'.

Appendix A - 2020 Benefit Year Reported Reinsurance Amount by Claim Spend Level

Incurred Claims		Enrollee Count	Average Incurred Claims Per Enrollee	Average Reinsurance Per Enrollee	Aggregate Reinsurance
Low Range	High Range				
\$50,000	\$52,508	155	\$51,198	\$958	\$148,534
\$52,508	\$58,498	354	\$55,457	\$4,365	\$1,545,383
\$58,498	\$119,795	1,761	\$80,824	\$24,659	\$43,424,822
\$119,795	\$200,000	557	\$153,704	\$82,963	\$46,210,511
\$200,000	\$9,999,999	452	\$349,424	\$152,392	\$68,881,102
Total		3,279	\$126,091	\$48,860	\$160,210,351

Notes:

1. Average Reinsurance Per Enrollee = $\min\{(\text{Average Incurred Claims} - \$50,000) \times 80\%, \$160,000\}$.
2. The claim intervals originate from the 1332 Waiver Application which have been combined to ensure each cohort has at least 100 enrollees.

Appendix B - 2020 Benefit Year Enrollee Count by HCC

Limited to HCCs with at least 100 Enrollees

Rank	HCC	HCC Description	Enrollee Count ¹	% of Reinsurance Eligible Enrollees
1	G01	Diabetes	597	18%
2	G15	Asthma; Chronic Obstructive Pulmonary Disease, Including Bronchiectasis	521	16%
3	HCC056	Rheumatoid Arthritis and Specified Autoimmune Disorders	456	14%
4	HCC008	Metastatic Cancer	437	13%
5	HCC142	Specified Heart Arrhythmias	435	13%
6	HCC130	Congestive Heart Failure	393	12%
7	G13	Respiratory Arrest; Cardio-Respiratory Failure and Shock, Including Respiratory Distress Syndromes	357	11%
8	HCC002	Septicemia, Sepsis, Systemic Inflammatory Response Syndrome/Shock	341	10%
9	HCC023	Protein-Calorie Malnutrition	263	8%
10	HCC048	Inflammatory Bowel Disease	245	7%
11	HCC156	Pulmonary Embolism and Deep Vein Thrombosis	227	7%
12	HCC075	Coagulation Defects and Other Specified Hematological Disorders	225	7%
13	G02A	Mucopolysaccharidosis; Metabolic Disorders; Endocrine Disorders	192	6%
14	G08	Disorders of the Immune Mechanism	183	6%
15	HCC253	Artificial Openings for Feeding or Elimination	173	5%
16	HCC131	Acute Myocardial Infarction	165	5%
17	HCC012	Breast (Age 50+) and Prostate Cancer, Benign/Uncertain Brain Tumors, and Other Cancers and Tumors	160	5%
18	HCC118	Multiple Sclerosis	151	5%
19	HCC088	Major Depressive and Bipolar Disorders	150	5%
20	HCC120	Seizure Disorders and Convulsions	146	4%

Appendix B - 2020 Benefit Year Enrollee Count by HCC

Limited to HCCs with at least 100 Enrollees

Continued...

Rank	HCC	HCC Description	Enrollee Count ¹	% of Reinsurance Eligible Enrollees
21	HCC045	Intestinal Obstruction	139	4%
22	HCC047	Acute Pancreatitis/Other Pancreatic Disorders and Intestinal Malabsorption	126	4%

Notes:

1. Products with less than 100 enrollees are labeled as < 100 for protected health information (PHI) reasons.
2. The *Enrollees* column counts enrollees that transfer between products more than once. As a result, the total enrollees in this section differs from the enrollee count shown previous portions of this report.
